THE SIGNLAB 10 ADVANTAGE
THE SIGNLAB 10 ADVANTAGE

Top 10 Reasons
to upgrade to SignLab 10
from SignLab 9.1 or 9.0

SignLab v10 is the fastest, most powerful and easiest to use version of SignLab ever released.

SignLab v9.1 and 9.0 provided a wide variety of design and production features and v10 builds upon these features by simplifying the user interface, adding more power to the processing speed and adding some new tools specifically requested by our customers.

1 Layer Manager. Easy to use and intuitive Layer Manager provides an organized way in which to view all the graphic elements within a design. An absolute "must have" when working with designs that include a multitude of objects and text. An added bonus is the integration of SignLab's powerful Instant Replay feature which allows you to drag and drop effects from one graphic element to another.

2 New Clipart Manager. Direct access to over 1,000,000 pieces of clipart, with the capability to link to online artwork databases. Bring files directly into SignLab jobs without having to export then import files. Completely redesigned, the SignLab Clipart manager also provides a simple way in which to organize and access clipart collections.

3 The latest technology. 64 and 32 bit speed on a foundation of all new SignLab processing code. Lightning quick handling of large graphic files, accelerated redraws, optimized import times on large bitmaps and all supported on the latest Windows operating systems; Windows 10, 8 and 7.

4 New special effects tools. SignLab has now even more great design tools to give your jobs that "wow" factor. Includes; soft shadow on vectors and bitmaps, distressed-bevel-outer glow-radiance-silver filters and much more.

5 Manufacturer vinyl and color palettes included. Customizable, dockable palettes from commonly used media manufacturers are included so that color matching is made quick and easy. All of the latest Pantone® color matching palettes are also included in SignLab v10 Print and Cut.

6 Optimized shape nesting. Cut objects and print objects are automatically nested onto media using an advanced algorithm. The media savings you are able to achieve alone are reason enough to upgrade to SignLab v10 Print and Cut.

7 Production plug-ins. Work seamlessly with the latest versions of Adobe Illustrator™, PhotoShop™ and CorelDRAW™ with "send to SignLab" plug-ins automatically installed in any of these applications installed on the same workstation.

8 Bezier node editing. Support of industry standard, Bezier object creation and editing. Simple, accurate editing of objects as used in many of the most popular graphic design applications.

9 Unicode support. Industry standard character script support provides the ability to create designs in all languages and software support within Windows™ installations of all languages as well.

10 Production spooler. Complete and efficient print and/or cut job management workflow using the production spooler on the local workstation or remotely via a network workstation.

Faster | Easier | More Powerful   SIGNLAB 10
