*1 The media holder of this machine is exclusively for media with a paper tube core inner diameter of three inches. To use a two-inch media core, please use the optionally available media flanges.
*2 The length of printing or cutting is subject to the limitations of the program.
*3 Using Roland specified media, loaded correctly, temperature: $25^{\circ} \mathrm{C}$ ( $77{ }^{\circ} \mathrm{F}$ ), humidity: $50 \% \mathrm{RH}$, all pinch rollers are used, 25 mm or more for both right and left margins and 35 mm or more front margin, excluding expansion or contraction of the media. and all correction and adjustment functions of this machine have been made properly. Not assured when the print heater or dryer is used.
*4 Using Roland specified media, print travel of 1 m
*5 [PREFEED] menu item must be set to "ENABLE," 64-inch and 54 -inch models, media over 610 mm wide, and $4,000 \mathrm{~mm}$ long
*6 Provided that media length is under $3,000 \mathrm{~mm}$. Excluding possible shift caused by expansion/contraction of the media and/or by reloading the media.
*7 Using Roland specified media, 64-inch and 54-inch models: data size: $1,000 \mathrm{~mm}$ in the media-feed direction, $1,600 \mathrm{~mm}$ in the carriage-movement direction. No lamination. Automatic detection of crop marks at 4 points when media is reloaded. During cutting, [PREFEED] menu item must be set to "ENABLE." Excludes the effects of slanted movement and of expansion and contraction of the media.
*8 Warm-up is required after power up. This may require 5 to 20 minutes, depending on the operating environment. The preset temperature may fail to be reached depending on the ambient temperature and media width.

* Roland VersaWorks Dual is a 32-bit application, which runs on 64-bit Windows ${ }^{\circledR}$ with WoW64 (windows 32-bit on Windows 64 -bit).
