

# JUST ADD YARD SIGN™

CORO SIGN POST & PANEL KIT™

JustAddYardSign™ is a wonderful option that makes yard signs better mounted and more permanent. This PVC post kit makes it easy and cost-effective for sign shops to assemble an attractive yard sign post and panel kit that will withstand wind and harsh weather and look professional for the long term. This solution up-sells well against cheaper wire and plastic stakes that bend and break and blow away. As a bonus, the kit can display the sign as well as a bottom rider.

Assembly and mounting can be completed in just a few minutes. Fasten your 4mm coro sign (flutes running horizontal) into the 32" tall posts and mount the assembled post and panel by pounding the stake/sleeve assembly in the ground. Add the decorative pyramid caps.

### Yard sign sizes JustAddYardSign™ accommodates:

12" h x 18" w  
18" h x 18" w  
24" h x 18" w

12" h x 24" w  
18" h x 24" w  
24" h x 24" w

6" h bottom rider can be added for all sizes except 24" h x 24" w

Order stock today for quick turnaround with all of your customers. Each unit is individually boxed and ready to ship to your customer via ground service.

Simple. Easy. Fast. Cost-Effective.

# JustAddYardSign™ Instructions

JustAddYardSign™ is a PVC post sleeve kit for creating a post and panel kit with a simple corrugated yard sign in minutes. The JustAddYardSign kits are pre-slotted for different sign board heights and widths. Assembly and mounting can be completed in minutes. Your beautiful new sign will look rich and withstand wind and weather and look great!

1. Kit includes: 2 white pvc posts, 2 green stakes, 2 white pyramid caps, 2 cap screws - 3/4", 4 sign screws - 4", 4 rider screws - 4" and a PVC pounding block (not shown).

2. The white pvc posts have slots on both sides that allow multiple height signs to be installed. You can install 12", 18" and 24" heights. The 18" height can have a 6" bottom rider as well.

3. The corrugated sign must have the flutes landscape (horizontal). Put the screw into the top slot of the post and fasten into one of the top flutes of the sign. Snug the screw (leave a bit loose so that it slides up & down in the slot).

4. There are two stake inserts inside each pvc post. Carefully slide each stake into the top and then bottom inserts. Once you see the stakes coming out of the bottom of the pvc posts you can pound the stakes into the ground. We include a pvc block to place on the top of the stake when it is near the pvc post so your hammer doesn't break the post. The stake should be set below the top of the pvc post so there is room for the cap to be mounted.

5. The picture shows how the cap is installed. - This should be done last after the sign is mounted in the ground. The whole mounting process should take around 5 minutes or so and you will have a sign that will withstand the weather and look great for a long time.

Uses include: For Lease, For Sale, Now Hiring, Farm Stand Signs, Now Accepting New Patients, Now Enrolling, For Rent, Etc.

The completed sign will look like this.

FYI- for a sign that is more permanent than a corrugated plastic sign, Alupalite works as a higher end replacement for the coro plastic..

**Thank you for your order. Enjoy!**
